desman Package

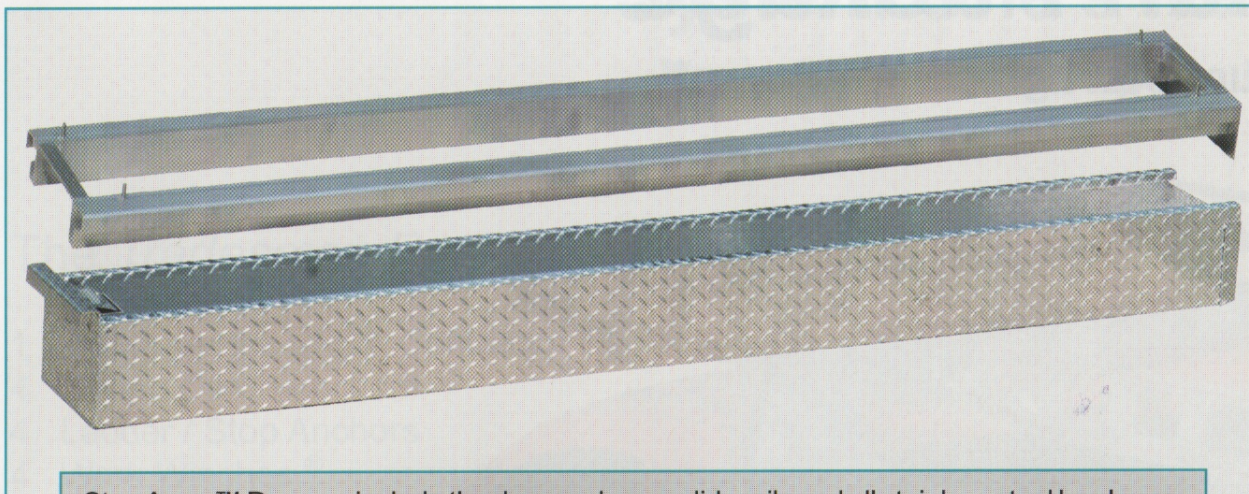

anized, secure storage compartment!

StowAway™ Drawers

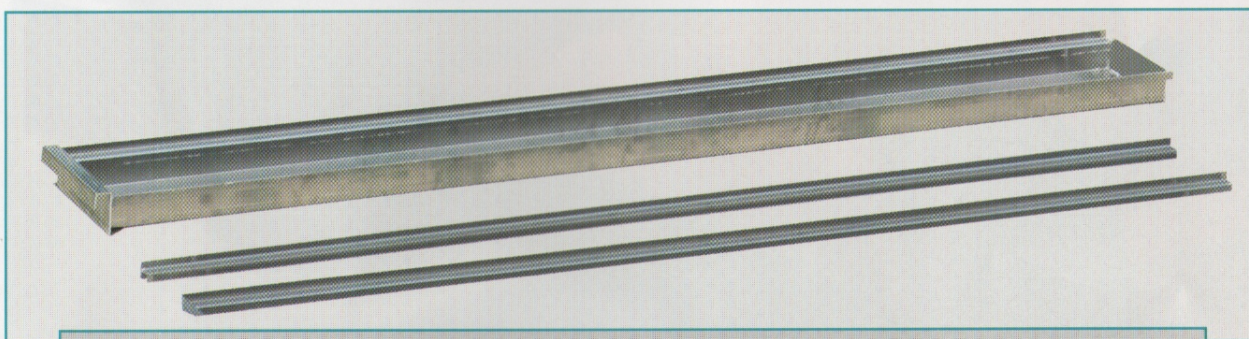

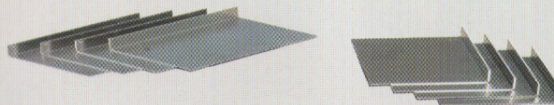

All drawer fronts can be fastened closed or remain hinged. The closed drawer option is used when the drawer itself is to be pulled out to access tools, bins, compartments etc. The hinged drawer front option is used when drawer unit is used with Pullout Trays or for long items. Drawers can also be completely removed in seconds leaving just the slide rails behind. Drawers come with locks and keys and can be keyed alike to match our Full Access® Tool Boxes.

StowAway™ Drawers and Accessories

StowAway™ Drawers include the drawer, drawer slide rails and all stainless steel hardware to mount to the underside of top-side tool boxes. The drawer front hinges down for access to pullout trays or long items, or it can be secured in the closed position when used as a drawer. The locks can be supplied keyed alike to match our Full Access® Tool Boxes.

Drawer dividers can be installed to create separate compartments within the drawer. They are available in packages of 8.

One or two Pullout Trays can be installed in StowAway™ Drawers. Sliding trays come with two sliding rails for each tray and are installed by drilling and mounting to the inside walls of the drawer. The drawer front is used in the "hinged position". Pullout Trays include the tray, tray slides and all stainless steel mounting hardware.

Tray dividers are available to create separate compartments within the Pullout Tray. They are available in packages of 6.
